### Software you will need:

1. 3GP Converter (free)
  - Official download page: <http://www.nurs.or.jp/%7Ecalcium/3gpp/>
2. Apple's iTunes (free)
  - Official download page: <http://www.apple.com/itunes/>

**This guide will show how you can easily convert .avi files to iPod video files.**

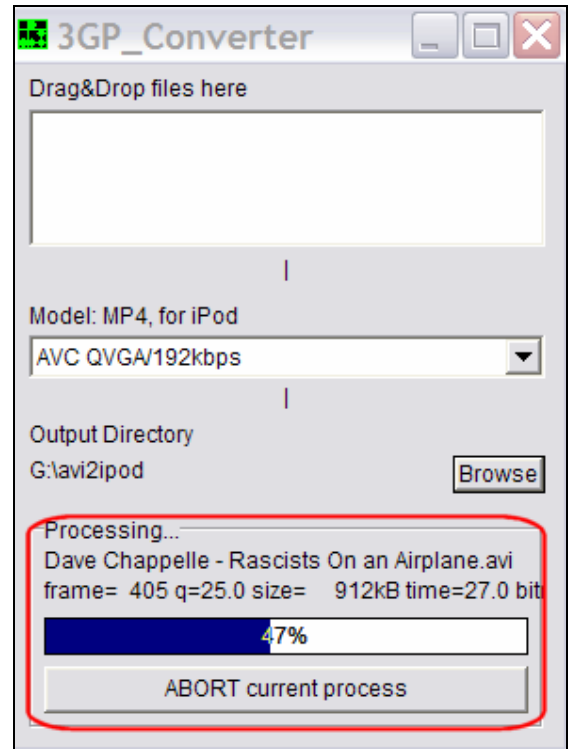

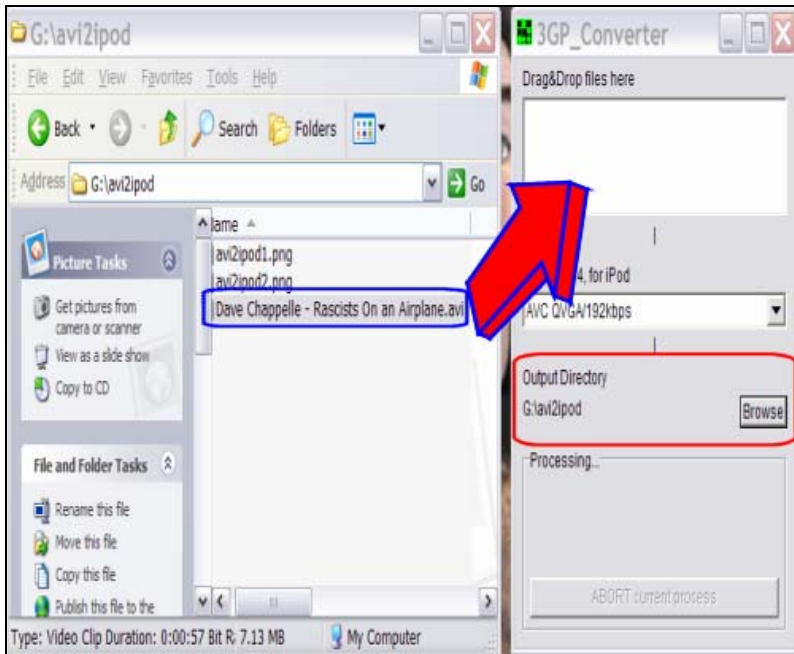

[ 1 ] First start up 3gp Converter (if this is your first time using it, you will need to select "English" for the language).

[ 2 ] After selecting "English", then select "Model: MP4, for iPod" in the upper section of the 3gp Converter window. After that click the "Apply" button.

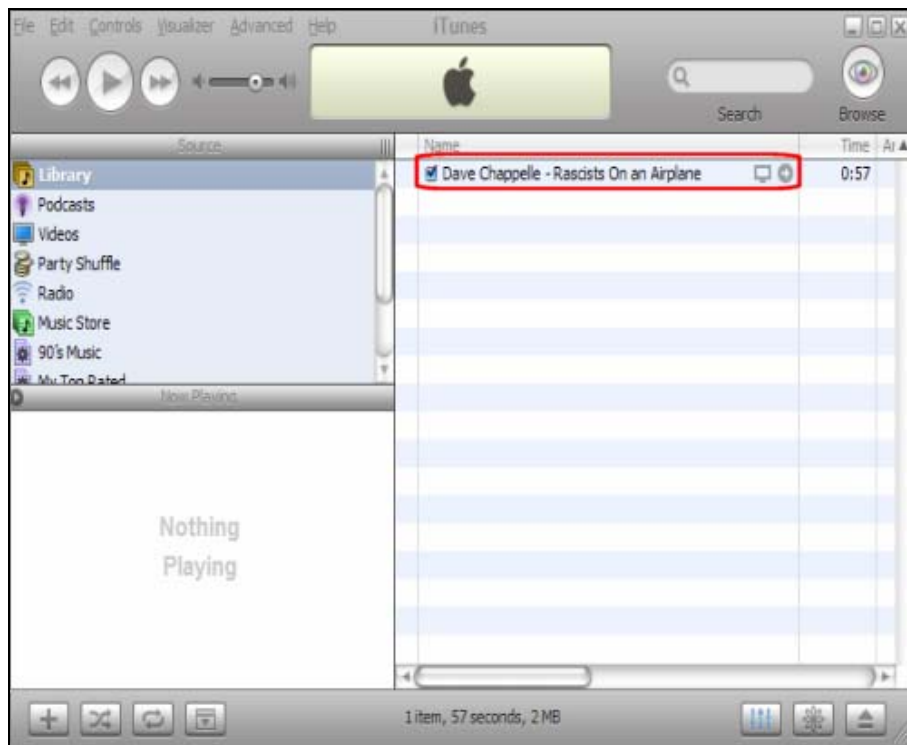

[ 3 ] From here just select the "Output Directory" and drag and drop the .avi file that you wish to convert to the top section of the 3gp Converter window.

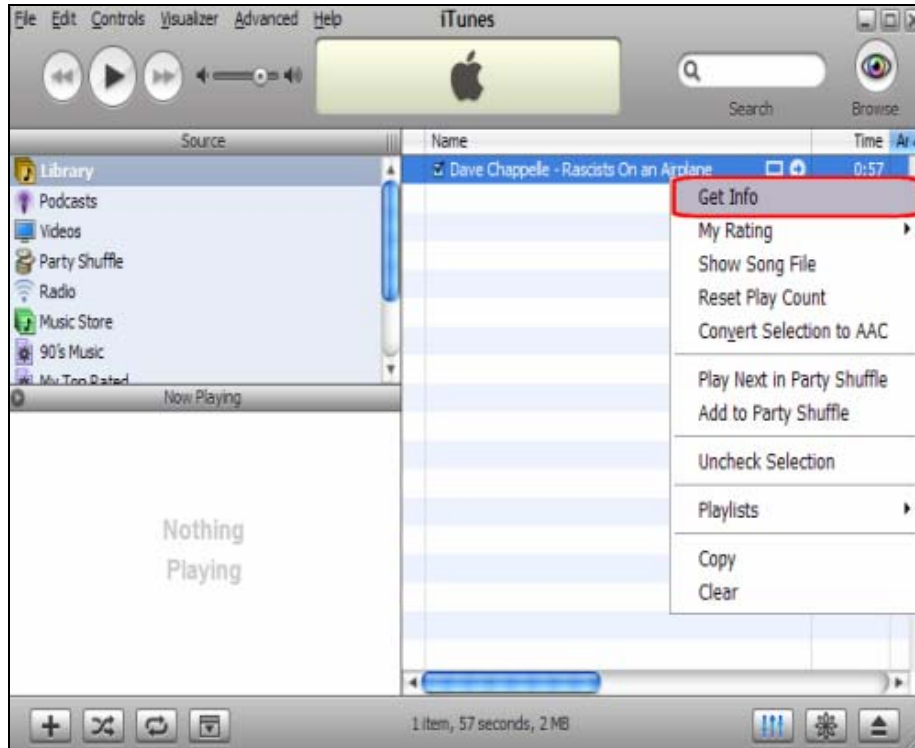

[ 4 ] After dragging and dropping the .avi file in to the 3gp Converter window, it will now start to convert the file for you.

[ 5 ] After converting, 3gp Converter will automatically start up iTunes and place the newly converted file you just made in the play list window.

[ 6 ] In the iTunes window, right click the file you just made and click "Get Info"

[ 7 ] On the screen that pops up, click the "Info" tab at the top, and then begin to fill out the details (Name, Artist, Album, etc.). The file name can be up to 255 characters in length if you wish to change it. You also have to re-add it to the play list if you decided to re-name it.
